Child-friendly Planning and Public Health

Message from the Guest Editors

Planning deeply influences the built and social environment. The field has the potential to be transformative in creating healthy physical and social environments and providing access to opportunity for kids. Access to services for children is heavily determined by their family, friend, and neighbor networks. Informal networks provide more than service support and access; they also help create neighborhood norms of sharing and caring. The disparity in community conditions for children reflects the racial and social inequities in society. Seeing the city through children's experience can help us build cities better for us all. Community engagement activities with children can empower youth and foster resiliency. Civic engagement of families with young children is critical to ensure that planning meets their needs.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
