

Special Issue

Advances in Child and Adolescent Clinical Psychology

Message from the Guest Editors

This Special Issue aims to show recent trends in the study of child and adolescent mental health by focusing on risk and protective factors, highlighting new empirical findings and theoretical perspectives, and suggesting clinical methodologies and interventions in order to understand and prevent pathways to psychological maladjustment in children, adolescents, and their families. This Special Issue ultimately aims to propose possible routes for mental health professionals to respond to inquiries about promoting psychological adjustment in children and adolescents, even during the COVID-19 pandemic. Researchers are invited to contribute original research to be considered for publication. Submissions should include empirical and theoretical articles, systematic reviews or meta-analyses, and clinical case studies. Original research articles, including a multi-method approach or a longitudinal design, are especially welcome.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
RCMI Center for Urban Health Disparities Research and Innovation,
