# Child Friendly Environments: Factors Influencing Children's Activities

# Message from the Guest Editors

Many children across the world do not currently meet the recommended levels of physical activity. Participation in physical activity provides many benefits for the physical and mental health and cognitive development of children. While the importance of outdoor play and independent travel has been recognized, children's outdoor time has reduced over the past several decades. Children's leisure time is increasingly spent indoors and supervised rather than independently outdoors. Parents are increasingly placing restrictions on their children due to perceived risks, resulting in lower levels of physical activity. To turn this trend around, the urban environment should become safer and more child friendly. To achieve this, many approaches are necessary, including: insight into mechanisms of behavior change, parental perceptions and decisions; the influence of the community (or social environment), technology, or policies on independent travel and play; how the physical built environment facilitates or limits children's play and travel.

# **About the Journal**

# Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

# Editor-in-Chief

Prof. Dr. Paul R. Ward

Centre for Public Health, Equity and Human Flourishing, Torrens University Australia, Adelaide 5000, Australia

#### **Author Benefits**

# **Open Access:**

free for readers, with article processing charges (APC) paid by authors or their institutions.

# **High Visibility:**

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.
