Special Issue

Advances in Children's Health and Well-Being

Message from the Guest Editors

One of the main goals of health services in our society is to promote the health and well-being of all individuals, and especially those who are more vulnerable than others, such as children. We are particularly interested in understanding how to promote children's health and well-being by utilizing inclusive approaches, giving space to new trends in this field, in particular regarding the following topics:

- Development of gender identity in children, with emphasis on children's gender nonconformity;
- 2) Development of children language skills and abilities;
- 3) Support to children with special educational needs;
- 4) Interspecific interaction between children and pets/other animals;
- 5) Children, digital technologies, and social media;
- 6) Support to ethnic, religious, and social minorities, including children at risk of discrimination.

We accept empirical and theoretical (conceptual) studies to enhance the health services' efforts to promote children's health and well-being from inclusive and health-enhancing perspectives.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
