Chronic Diseases and Multimorbidity in Primary Care

Message from the Guest Editor

The rates of awareness, treatment, and control of chronic diseases differ widely across countries. Patients with multimorbidity have greater health care needs, with consequent additional primary care visits, hospital re-admissions, and inevitably escalating healthcare costs. Environmentally sustainable designs and cost-effective strategies are needed to ultimately improve clinical outcomes. The contributions of primary care have been demonstrated globally. Strong primary care is associated with more appropriate, more effective, and less costly care. In face of the emerging public health problems stemming from chronic diseases and multimorbidity, primary care-based multi-disciplinary health care models will need to be implemented. Research studies with complex and innovative designs may carry new perspectives. We invite international researchers to contribute a variety of papers, including original research articles, essays, and review articles, that could add to the current knowledge on any subject area related to chronic diseases and multimorbidity in primary care. The listed keywords suggest just a few of the many possibilities.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
