Chronic Conditions: Issues and Challenges

Message from the Guest Editors

Chronic conditions are a major concern worldwide. The burden of chronic conditions is growing rapidly in low- and middle-income countries. Thus, timely research on optimal approaches for the identification and management of chronic conditions is welcomed. Furthermore, the explosion of large-scale real-world data is facilitating the rapid progression of precision and stratified medicine approaches toward managing chronic conditions, and these consider the role of genetics, biological phenotypes, ethnicity, and social and environmental contexts. We welcome epidemiological and clinical studies describing the prevalence and incidence of chronic conditions, risk factors and outcomes, and approaches to pharmacological and non-pharmacological management of these conditions. We would welcome papers on but not limited to:

- Multimorbidity;
- Mental health in chronic disease;
- Management of chronic conditions in low- and middle-income countries;
- Social and ethnic inequalities in burden, treatment, and outcomes of chronic conditions;
- Challenges and opportunities in health service provision for chronic disease;
- Treatment strategies for long-term conditions.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
