Impact of Chronic Illness on Quality of Life and Mental Health in Patients and Their Families

Message from the Guest Editor

Over 95% of the world's population has a chronic illness (long-term condition), and one in three adults live with multiple chronic conditions. Long-term conditions significantly impact all aspects of health and quality of life and are associated with an increased likelihood of mental health issues, which can in turn impact the management of long-term conditions. Furthermore, long-term conditions impact not only individuals, but also their families, particularly those who provide informal care. This Special Issue focuses on the current state of knowledge regarding the impact of chronic illness on quality of life and mental health in individuals with chronic (long-term) conditions and their families.

New research papers and reviews, both qualitative and quantitative, are welcome in this issue. We particularly welcome longitudinal studies, dyadic designs, and studies addressing multimorbidity. Methodological papers relating to quality-of-life measurement are also welcome, as are position papers and brief reports. Studies from a range of disciplines, including health psychology, medicine, nursing, and epidemiology, are welcomed.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
