

## Special Issue

# Climate Change and Human Health Impacts and Adaptation

### Message from the Guest Editors

It has been known for centuries that climatic conditions affect human health in many different ways. The relationships between human health and climate have become especially important in the last decades. Global climate change, regional weather extremes, and large-scale epidemics are generating international interest in the effects of climate on human health and mortality.

This special issue is focused on all aspects of how weather and climate variability interact with human health. The editors encourage submissions that address novel theories and methods, those that question previously-reported ideas, and those that use prior results to predict possible future scenarios.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
