Systems-Level Community-Based Chronic Disease Prevention Interventions, Policies, and Research

Message from the Guest Editors

We are interested in case studies and outcome studies of innovative, *community-led* systems-level approaches to chronic disease prevention including cross-sector, place-based interventions; community-prioritized chronic disease programs and policies; policies that affect social change efforts; building community capacity and infrastructure for systems change; strategies that overcome biases and privilege in traditional funding; participatory or empowerment approaches to intervention evaluation. Lastly, we are interested in studies of the impacts of COVID on chronic disease prevention and innovative COVID response and recovery interventions. Keywords

- chronic disease prevention
- community-led public health planning
- community capacity building
- social and policy change impacting health
- systems thinking
- community-based participatory research

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul R. Ward

School of Society and Culture, Adelaide University, Adelaide 5001,
Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.
