

Special Issue

Complex Interventions for Public Health Improvement

Message from the Guest Editors

Improving public health requires concerted effort to prevent non-communicable diseases such as cardiovascular disease, cancers, and mental health conditions, and promote positive wellbeing. These outcomes are related to a broad range of 'modifiable' behaviours such as smoking, substance use, diet, physical activity, and gambling, which are shaped by interacting causes at multiple socio-ecological levels, from the individual to the political. This Special Issue invites papers that provide empirical case studies or critical reflections on the use of current frameworks and methodologies for developing, evaluating, and implementing interventions to improve public health, or which advance new frameworks or methodologies.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
