Special Issue

COVID-19 in Dentistry and Dental Education

Message from the Guest Editor

The SARS-CoV-2 pandemic has affected life throughout the world, and dentistry is no exception. Dentistry has already been shown to be a hazardous occupation due to numerous infectious and health risks associated with it. Over the past year and a half, this risk has only grown because of the highly transmissible nature of the Coronavirus. Dentistry, being a profession where the operator and the assistants are in close contact with the patients, has seen numerous changes. Not only this, but even dental education has been impacted as most of the teaching over the pandemic period has been conducted online. Dental education has been highly impacted as it involves a major part being hands-on. Due to this, there are several social, financial, and health-related repercussions that must be analyzed and understood. The aim of this Special Issue is to invite manuscripts, both research and review that analyze the SARS-CoV-2 situation with regard to dentistry and dental education.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul R. Ward

Centre for Public Health, Equity and Human Flourishing, Torrens University Australia, Adelaide 5000, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.
