

Special Issue

COVID and the Economics of Public Health

Message from the Guest Editors

COVID-19 teaches us many lessons. One is about the importance of public health. Every day we can see how huge the negative consequences of a pandemic are, not only for global health, but also for the broader societies that face shrinking economies and increasing income disparities. COVID-19 raises important questions for the larger community of public health economists. How do we strengthen and increase the legitimacy of their analytical toolboxes? This Special Issue seeks original contributions that analyze how the toolbox of public health economics can strengthen effective policies for pandemic outbreaks. Submitted articles can cover a range of issues. What do we know about the cost-effectiveness of public health interventions that target COVID-19 and other infectious diseases? How can cost-effectiveness studies assess pandemic preparedness? What are the effects of the effective prevention of infectious diseases on the total costs of healthcare? How can more participative and interactive approaches in the field of HTA contribute to effective policymaking? What do we know about effective models of the governance for a cost-effectiveness analysis of public health?

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
