Current Trends in Mental Health Research in Asia Pacific Region

Message from the Guest Editor

The Global Burden of Disease Study, which measured disease burden, estimated that mental and behavioural disorders accounted for 22.7% of all years lived with disability (YLD), which was an increase of 37% from 1990 to 2010 (Vos et al., 2012). Asia Pacific is a region characterised by rapid changes in economic and technological development, population growth, migration, and demographics. Across this region, mental illness causes a significant health and socioeconomic burden, which on average accounts for more than 20% of the total YLDs and 9.3% of the DALYs of the economy (Ng, 2018). While the impact of mental illness in this region is growing, very few papers in the literature to date have updated the current trends of research on mental health in this region. Hence, this Special Issue will provide up to date current research findings in the area of mental health. We invite authors to submit manuscripts related to all aspects of mental health research that have been conducted recently in the Asia Pacific region.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
