Special Issue

Advances in Anxiety and Depression Prevention

Message from the Guest Editors

Depression is predicted to be the leading factor contributing to the burden of disease worldwide by 2030. To reduce the impact of these conditions and improve mental health outcomes, preventive interventions are imperative. This Special Issue in the *International Journal of Environmental Research and Public Health* is devoted to recent findings in "Advances in Anxiety and Depression Prevention" to make substantial contribution to knowledge gaps in understanding prevention of depression and anxiety. A wide range of topics will be included in this issue, related but not limited to preventive interventions, risk and protective factors, mediators and moderators of the preventive interventions, and implementation of the interventions in different setting. We welcome the submission of protocols, original research articles, short reports, systematic reviews, and meta-analyses targeting any of these topics and beyond. We are interested in submissions which are as wide-ranging as possible across geographies and jurisdictions. Studies using innovative research methods to study these topics are most welcome.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
