Digital Health Innovations That Address Mental Health among Children and Youth

Message from the Guest Editor

Digital health innovations have considerable potential to minimize health inequities by not only understanding access gaps but also by making mental health and substance misuse services more accessible.

Furthermore, digital healthcare can reduce social stigma by providing services and support via ubiquitous digital devices. This Special Issue calls for original research, systematic and scoping reviews, and evidence-based policy briefs that advance digital health solutions to address mental health and substance misuse among children and youth. The submissions can include research from the disciplines of clinical and social psychology, epidemiology, health promotion, and public health, among others.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
