

Special Issue

Measuring Disability and Disability Inclusive Development

Message from the Guest Editors

Disability inclusion is both a process and an outcome, ensuring people with disabilities meaningfully participate in development activities and enjoy the benefits of policies and programs on an equal basis with others. Evidence-based disability-inclusive policies and programming require reliable data on people with disabilities and their experiences. This Special Issue intends to strengthen the evidence-base on disability-inclusive global development, documenting both research methods and results related to measuring disability-inclusive development. We invite researchers globally to contribute any papers describing and critically evaluating methods used to assess disability-inclusive development, or describing results from such research. We welcome submissions across all development sectors, including health, rehabilitation, education, employment, WASH, disasters (including COVID-19), and social protection. We encourage submissions documenting research related to disability-inclusion both as a process, and as an outcome.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
