

Special Issue

Food Safety Knowledge and Eating Behavior of Consumers, with a Particular Focus on Adolescents

Message from the Guest Editors

In this Special Issue, we aim to focus on the current state of knowledge about food safety and eating behavior in different populations, especially among young people, and its relations to human health. Understanding the behavior of young consumers and the gaps in the education process in relation to food safety can lead to the development of appropriate educational programs that will help to combat outbreaks of food poisoning among children both now and in their adult lives. The food safety knowledge and eating behavior of consumers should be considered in the context of the global COVID-19 pandemic as well as with regard to other aspects—for example, sustainable development and Agenda 2030 (goal 3).

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
