Special Issue

Economic Evaluation of Public Health

Message from the Guest Editor

Chronic diseases are defined by the World Health Organization as requiring "ongoing management over a period of years or decades" (WHO, 2002). The increasing burden of these conditions is one of the greatest challenges confronting health systems globally. representing a major cause of premature mortality and having a significant impact on life expectancy and healthy life expectancy. They have a deleterious effect on the quality of life and are leading drivers of healthcare costs, accounting for significant proportions of healthcare expenditure. In the US, 60% of adults have one chronic condition, with 40% having more than one (CDC, 2020). The prevention of chronic conditions, therefore, has major health and economic benefits but challenging logistical obstacles to overcome. Papers addressing evaluations of public health interventions are therefore invited for this Special Issue, especially those combining a high academic standard coupled with a focus on methodological and contextual challenges encountered.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
