

Special Issue

Ecosystem Health and Environmental Geography in the Belt and Road Regions

Message from the Guest Editors

The “Belt and Road” initiative to call for a new regional cooperation model. It is an economic and political issue, but some scholars have proposed that it may destroy ecosystem health permanently and have reported this opinion in various scientific journals. This Special Issue seeks novel scientific papers on the dynamics of regional ecosystems and environments, the mechanisms of ecosystem and environmental changes, and the strategies and solutions for environmental problems in the Belt and Road region. Research on the following topic is welcome, though other topics will be considered as well:

- Characteristics and mechanisms of ecosystem health;
- Ecological health and regional development;
- Interactions between the economy and the environment;
- Environmental impacts of the Belt and Road;
- Energy transformation for the Belt and Road initiative;
- Spatial analysis and monitoring technology for the environment.

This Special Issue accept papers on scientific issues rather than on political issues. Reviews are encouraged, and scientific research papers that are supported by scientific data are preferred.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
