

Special Issue

eHealth in Chronic Diseases

Message from the Guest Editors

The handling of chronic diseases is a multidisciplinary process requiring close coordination and high engagement between chronic disease patients and healthcare professionals. As a result of the COVID-19 pandemic, many health programs have transitioned rapidly towards remote delivery models. Electronic health (eHealth) solutions are put forward as a promising way to deliver health information and health care. For this Special Issue “eHealth in Chronic Diseases” in the IJERPH, we invite submissions that examine the use of eHealth in chronic diseases. This includes, but is not limited to, studies that examine how eHealth can help to prevent, evaluate, or treat chronic diseases and their outcomes. For example, studies using remote methods of assessment, interobserver agreement in remote assessment, and the implementation of internet-based interventions are welcome. The application of eHealth in the different areas of medicine and allied health professions will be considered. This Special Issue offers an opportunity to publish high-quality multidisciplinary research and reviews that focus on eHealth in chronic diseases.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
