

Special Issue

Emotional, Behavioral, and Psychological Impact of COVID-19 Pandemic

Message from the Guest Editor

The COVID-19 pandemic has profoundly affected people's lives. In fact, many different confinement measures have been implemented around the world to reduce the risk of infection. In particular, stay-at-home policies have led people to reduce their mobility and increase social distancing between individuals, leading to profound changes at different levels, such as public health, economic crisis, and increased unemployment. At the individual level, the psychological effects of the pandemic have led to increased anxiety and stress, both related to the perception of the virus and its long-term consequences, changes in sleeping-waking rhythms but also the exacerbation of prior psychiatric conditions. This Special Issue of the *International Journal of Environmental Research and Public Health (IJERPH)* aims to promote knowledge of the emotional impact that COVID-19 has had on individuals and groups.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
