

Special Issue

The Environment-Health-Place Nexus

Message from the Guest Editor

What role does *place* play in the relationship between environment and (public) health? Is it passive (a foundation? A backdrop?) or is it active (a moderator? A mediator? A determinant?). The papers in this Special Issue will explore these relationships across a range of places (North America, Europe, Central and East Asia, and Sub Saharan Africa), a range of spatial scales (global, national, regional, and local), and a range of environmental exposures (physical environment, built environment, and social/cultural/political environments), in order to provide *place* with pride of place. About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
