

Special Issue

Advances in Environmental Modelling

Message from the Guest Editor

Environmental simulation models provide a solution exploration space for many of the key issues and problems we face in the custodianship of our planet. The turn of the decade is a good time to take stock of the state-of-the-art and the new or remaining challenges for the research agenda. This special issue on *Advances in Environmental Modelling* will include within its remit simulation modelling of physical, biological, economic and socio-cultural environments. The theme will incorporate not only advances in the approaches to environmental modelling per se, but a more broader view on the evolving contributions that these models make in decision-making and to the sustainability agenda.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou

RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
