

Special Issue

Environmental Epigenetics: Implications for Health and Disease

Message from the Guest Editor

This Special Issue invites papers focusing on the impact of environmental exposures on the epigenome. Studies that relate epigenetic changes to health outcomes are encouraged. Full-length research articles or brief communications reporting original research results from epidemiological, animal, or in vitro studies are welcome. Critical reviews (systematic reviews or meta-analyses) are also welcome. We encourage prospective authors to submit a 350-word (maximum) abstract by 29 February 2020 for consideration and feedback. Authors whose abstracts are accepted will be invited to submit a full manuscript. Subject to the decision of the Special Issue editors, up to 5 manuscripts accepted through this process will receive a waiver of the Journal publication fee. In addition, authors may submit their paper through the typical journal submission process, and the usual journal processing fee will apply. All manuscripts will be subject to the Journal's peer review process.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou

RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
