

## Special Issue

# Accumulating Evidence on Child and Adolescent Health from Cohort Studies

### Message from the Guest Editors

This Special Issue focuses on the current state of knowledge on the links between the aforementioned environmental risks, both traditional and emerging, and child and adolescent health. Environmental risks include chemical, physical, biological, social, and cultural/practice-related exposures. This Special Issue is looking for evidence based on cohort studies of various geographical locations as well as different cultural/racial backgrounds. Manuscripts on the health outcomes of children and adolescents in association with not only simple environmental exposures, but also investigating gene environmental interaction and epigenetics are very welcomed. Additionally, systematic reviews and meta-analyses are welcome to this issue. Other manuscript types, including methodological papers, brief reports, and commentaries, may be accepted.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
