

Special Issue

Advances in Environmental Toxicology, Pathology and Monitoring

Message from the Guest Editors

This Special Issue of the *International Journal of Environmental Research and Public Health* (IJERPH) focuses on the current state of the art and perspectives in environmental toxicology, pathology, and monitoring at all integration levels, from molecules to ecosystems. Articles based on field investigations and/or on laboratory experiments, especially those considering environmentally relevant concentrations or having applications in field research and risk assessment, are invited to this Special Issue. We will consider manuscripts dealing with all classes of pollutants, their effects, mechanism of toxicity, interaction with other stressors, biomarkers, and methods to detect their occurrence and impact in abiotic and biotic matrices. The application of new and/or multidisciplinary approaches is encouraged. Original research manuscripts, reviews, and case reports are welcome to this issue.

Guest Editors

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
