

Special Issue

Children's Mental Health, Parenting, Family and Groups' Resilience in Crisis

Message from the Guest Editors

In psychology, the ability to thrive in the face of adversity is known as resilience—an essential concept in child development, mental health theory, and research. A focus on family resilience seeks to identify the critical processes that enable families to cope effectively with crises or persistent forms of stress and emerge stronger from challenging situations. For this purpose, we are collecting contributions for a Special Issue on Children's Mental Health, Parenting, Family and Groups' Resilience in Crisis. We invite the submission of original research papers, reviews, notes, comments, etc., to be published in the *International Journal of Environmental Research and Public Health*. Our aim is to shed light on children's and parents' emotional-behavioral state and how it evolves during the crisis period, identifying stress factors and resilience factors. It could also be interesting to investigate the types of treatment provided in the time of crisis, assessing families' adaptation to changes in the way they receive care, and their efficacy in terms of managing patients' emotional-behavioral difficulties.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
