

Special Issue

Food Consumption and Health Issue

Message from the Guest Editors

Food consumption impacts many aspects of health, particularly those related to chronic disease risk and management. In this Special Issue of IJERPH, we encourage the submission of manuscripts (both original research and review articles) related to the factors that affect food consumption across varying populations and impacts of varying aspects of food consumption (e.g., macronutrient variation, eating behaviors, caregiver feeding behaviors, dietary interventions for populations with a particular disease). Studies that assess how food-related policies impact consumption and health outcomes are encouraged as well. Manuscripts focusing on innovations in food as medicine, particularly for chronic conditions, are very welcome, as well as studies addressing cross-cultural differences or differences across income levels in food consumption and how that impacts disease risk and quality of life or longevity.

Guest Editors

Dr. Katherine Isselmann DiSantis

Dr. Kristie J. Lancaster

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul R. Ward
