Social Determinants and Geographic Disparities in Health and Health Care

Message from the Guest Editor

Two of the most important themes of health geography and public health in the 21st century are the inequalities and inequities in social determinants of health and health care and how inequalities and inequities in social determinants result in geographic disparities in health and health care. Health geographers, public health researchers and other social and health scientists who are carrying out research on these two themes are invited to submit their manuscripts on any aspect of the social determinants of health and health care and how they explain geographic disparities. Research on geographic disparities related to any health or health care issue, on any population group, at any geographic scale, and from any country or region will be considered for publication subject to peer review.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
