

Special Issue

Global Food Security and Public Health

Message from the Guest Editors

Food security and the ability of communities to access a sufficient quantity, quality, and variety of culturally appropriate food is more important than ever. Changes to global food chains, to eating patterns, and to nutrition requirements are putting pressure on communities and require new and creative public health responses to food insecurity. We are excited to edit this Special Issue of the *International Journal of Environmental Research and Public Health*, specifically looking at Global Food Security and Public Health. This Special Issue will focus on research that seeks to address food insecurity all over the world and in a variety of population groups, with a special focus on public health responses, initiatives, and interventions that seek to address food insecurity

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
