Advances in Hazardous Waste and Human Health

Message from the Guest Editor

Topics covering health protection including the proper management of specific categories such as healthcare waste and electrical waste, the correlation between exposure to toxins and acute and chronic diseases, the role of biomarkers in signaling, environmental pressures, and increased risks of chronic health effects are of interest. These may also be of use in establishing health surveillance programs and supporting environmental risk assessment. Emerging pollutants and strategies for their elimination, informal practices, and the global impacts of regional waste management decisions are also relevant. Please consider contributing up-to-date reviews and your latest research findings on all relevant aspects.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
