Topical Collection Health Care and Diabetes

Message from the Collection Editor

According to the World Health Organisation (WHO, 2015), 347 million people are currently living with diabetes worldwide. This number is expected to rise to 592 million by 2035, with the number of people with type 2 diabetes increasing in every country (International Diabetes Federation, 2015). As a result, the problem of diabetes has drawn interest from different strata of health care provisions, including primary, secondary, tertiary care and public health. Researchers and practitioners in this field have also been looking at advances in diabetes care and management, including diagnosis, prevention, treatment and multi-morbidity. Developing strategies for reducing the risk factors. which predispose the population to diabetes, the acute and long term complications, and understanding the cost of diabetes in terms of health expenditure are crucial in decreasing the full impact of the condition. This Topical Collection is open to the subject area of health care and diabetes. The keywords listed below provide an outline of some of the possible areas of interest.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul R. Ward

Centre for Public Health, Equity and Human Flourishing, Torrens University Australia, Adelaide 5000, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
