

Special Issue

Health Systems and Services

Message from the Guest Editors

Health systems research brings particular challenges and opportunities: interdisciplinary working; collaborating with clinical and other healthcare staff; simultaneously working at different levels of a system or organisation; designing/co-designing interventions; constructing studies that can rigorously test such interventions; and working closely with the potential beneficiaries and end users of research throughout the process, be they patients, carers, clinicians or managers. As researchers we are being pushed to step outside of our comfort zones and find new methods to explore and understand the complexity of health systems and new designs to implement and test interventions in this dynamic environment. This special issue has a focus on new methodologies in research and implementation of health systems interventions. Papers that describe research and evidence-based interventions in the hospital or at the hospital-community care interface and utilise novel or complex methods are invited. Papers focusing on research that is co-designed by researchers, healthcare staff and patients would be particularly welcome.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
