

# Special Issue

## Healthy Ageing Communities

### Message from the Guest Editors

Population ageing is a global phenomenon. Around the world, the epidemiological burden has shifted to age-related, noncommunicable diseases, whereas long-term care for older people is not yet systematically financed in many countries. While universal access to health and long-term care is the objective of many countries, health promotion that encourages people to lead a healthy and productive life is increasingly important; however, it has yet to be addressed in many parts of the world. This Special Issue will bring together papers that focus on evidence and practices that lead to healthy ageing in the scope of public health, social policy, and several areas in gerontology.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
