

## Special Issue

# Health Behaviour and Health Promotion in School-Aged Children

### Message from the Guest Editors

This Special Issue proposes to share recent empirical evidence and novelty in studies in the field of Health Education and Health Promotion in School-Aged Children, with a focus on health behaviours, specifically those related to the health and well-being of the pre-adolescent and adolescent population. Moreover, this Issue aims to disseminate knowledge that could enlarge the perspective on effective actions and local policies to reduce the risk of vulnerable marginalized youth and to foster an understanding of any protective factors needed to address challenges youth face along their growth. We welcome quantitative, qualitative, and mix-methods research manuscripts related to this issue, dealing with the health needs of school-aged children and proven health promotion initiatives, as well as translational research able to explore effective community health approaches while also considering organizational, community, or local strategies.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
