

Special Issue

Social Determinants of Health Inequities and Prevention

Message from the Guest Editor

There is now compelling evidence that social, economic and environmental factors account for enormous disparities in health and wellbeing in both developed and developing countries. Social determinants, such as employment and education opportunities, access to housing, neighborhood environments and social marginalisation, can both create and perpetuate existing health inequalities. War, racism, homelessness, technological change and loneliness are among other issues that can also be viewed through a social determinants of health lens. This Special Issue is open to any subject area related to the impacts of social determinants on health inequities, with a particular focus on prevention and evidence that can inform policy and practice efforts to address socially determined causes of health disparity.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
