Health Literacy Development among People with Chronic Diseases: Advancing the State of the Art and Learning from International Practices

Message from the Guest Editors

Chronic diseases account for a considerable part of the strain on health care systems. They are also burdensome for each affected individual and their families. In recent years, the concept of health literacy has been substantially elaborated on, particularly with regard to its definition, its transfer into the digital world, the development and conduct of interventions, and efforts to improve its measurement. While advancements are uncontested, the specific demands of chronically ill people for health literacy skills, health literate environments, and challenges attached to these demands remain unchanged. Furthermore, specific aspects of health literacy advancements are either still unresolved or emergent because of dynamic developments in health and health care.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
