Special Issue

Healthcare on Rare Diseases

Message from the Guest Editors

To date, more than 7000 rare diseases have been described around the world, yet minimum scientific knowledge has been generated for only about 800 of them. The main problems that are faced by patients diagnosed with one of these diseases are chronicity, their degenerative nature, and their high likelihood of causing disabilities. In many cases, finding an effective treatment is often a very complex process, in which the role of the nursing teams is essential, as they are best equipped to offer the evidence-based quality care patients need in order to quarantee the maintenance and improvement of their quality of life. The Special Issue intends to highlight the importance of healthcare and the management of rare diseases by providing an update on the available information on this type of diseases, through the description of new cases and the planification of specific guidelines and protocols that will improve clinical practice. The multidisciplinary approach that the world of rare diseases needs must take into account the perspective of all fields of healthcare: medicine, nursing, physiotherapy, podiatry, psychology, etc., all of which shall be welcome in this Special Issue.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
