# Changes in Heatwaves – Past, Present and Future

### Message from the Guest Editor

Heatwaves are a special case of extreme temperature events, defined as prolonged periods of excessive heat. It is clear that increasing global temperatures due to anthropogenic climate change have, and will continue to, force an increase in the intensity, frequency of heatwaves. However, heatwaves are complex events for many reasons.

While the climate and impacts communities have made some important discoveries on heatwaves and their changes over the last decade, we still have a lot more research to do. Therefore, I invite you to contribute to this exciting and progressing field, and continue the dialogue on how heatwaves are changing, why this is so, and who or what will be most affected.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
