

## Special Issue

# The Harmful Effects of Fluoride Exposure

### Message from the Guest Editors

Although fluoride is widely used for dental and industrial applications, our understanding of chronic and sub-acute mechanisms for fluoride toxicity are incomplete. Nevertheless, environmental exposures to fluoride from a wide range of consumer products and industrial sources are still increasing. New studies support a growing body of evidence that fluoride should be classified as a neurological toxicant and that the interplay between fluoride toxicity depends greatly on other nutritional and immunological factors. Advancing our knowledge of genetic, developmental and comorbidity susceptibilities to fluoride toxicity are needed. This special issue invites papers to evaluate and monitor the many factors regarding fluoride exposures and mechanisms of toxicity.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
