

## Special Issue

# HIV Prevalence and Associated Factors

### Message from the Guest Editor

Despite tremendous progress in HIV testing, treatment, and efforts to address HIV stigma, HIV remains a major public health concern. However, progress remains uneven across the world, with eastern and southern Africa most affected by HIV. In addition, gaps in the testing and treatment cascade are larger for some subpopulations, including children, young people, and men. Furthermore, key populations remain at disproportionately greater risk of HIV. The SARS-COV-2 pandemic diverted and shifted attention and resources from HIV programs, reversing some of the prior gains and highlighting stark inequalities in access to HIV care. There is now a renewed focus on addressing HIV alongside the SARS-COV-2 pandemic to recover gains and sustain progress toward the 95-95-95 UNAIDS targets. This Special Issue invites papers that examine HIV prevalence and related factors at individual, community, societal, and health system level, including coexisting infections and conditions, with a focus on lessons for the present and the future. We also encourage topics that focus on disparities and marginalized population groups.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
