

Special Issue

Homelessness and Public Health

Message from the Guest Editors

Homelessness is closely connected to declines in physical and mental health; homeless persons experience high rates of health problems, such as HIV infection, alcohol and drug abuse, mental illness, tuberculosis, and other serious conditions. The health problems facing homeless persons result from various factors, including barriers to healthcare, lack of access to adequate food and protection, and limited resources for social services. Legal and policy interventions have often been used to attempt to address homelessness, although not always from a public health perspective. This Special Issue will explore the public health implications and potential solutions to homelessness, explore emerging research and innovative strategies, and highlight best practices to address homelessness among this key population. In addition to elevating and articulating a clear strategy to reduce homelessness and suggest how to provide more adequate health and housing for this population, authors in this Special Issue will explore solutions for important subpopulations, including young adults, veterans, and those experiencing chronic homelessness.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
