

Special Issue

Inequalities and Tobacco Use

Message from the Guest Editor

Policy-makers have begun to view inequalities as a salient factor of tobacco use behaviors. The fact that economic, race, and ethnic and gender inequalities are in the core of policy and media debates provides opportunities for tobacco researchers to affect policies by speaking directly on the role of inequalities in tobacco use behaviors. Research on how inequalities operate to affect tobacco use outcomes such as smoking, e-cigarette use, and nicotine dependence is needed to shape policies that will reduce the tobacco use inequities experienced by disadvantaged groups. We need to identify the disadvantaged groups that are more vulnerable to tobacco use and dependence and how the combination of multiples inequalities (e.g., unemployed Black and Latino living in poor communities) affects tobacco use. For this Special Issue, we invite original research papers on the effects of inequalities (e.g., economic, racial, ethnic, gender, geographic) on outcomes (e.g., initiation, use, cessation, and dependence) of the use of tobacco products (e.g., cigarettes, electronic delivery systems, smokeless tobacco, hookah, cigars).

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
