Infant Care Practices and Reducing Infant Mortality: Innovative Strategies and Future Perspectives

Message from the Guest Editors

We welcome papers that address infant care practices and their relationship with risk factors for infant mortality, including measures of community awareness and caregiver uptake of safe sleep recommendations, and the identification of infant care practices that are the most difficult to understand and implement. In particular, this Special Issue seeks to highlight innovative multidisciplinary approaches to reduce infant death that acknowledge a socioecological lens to capture and address the complex and multifactorial nature of disadvantage experienced by many families who suffer from a sudden and unexpected infant death. We look forward to receiving your contribution to a Special Issue that promotes this “sociological” turn and collaborative approach, which identifies priorities for sudden infant death research.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
