Special Issue

Chronic Infection of Tropical Diseases

Message from the Guest Editor

Tropical diseases contribute to a vast social and economic burden resulting from social shame, somatic disabilities, blindness, discrimination, malnutrition, growth failure, and impaired cognitive development. The resulting outcome of these factors perpetuates the cycle of poverty by preventing individuals from leading productive lives, thus affecting families, communities, and countries as a whole. Another factor that aggravates this situation is the tendency for many of these diseases to become chronic, exacerbated by the lack of treatments, inadequate treatments, or absence of medical attention and adequate hygienic-sanitary conditions. To address this situation, in-depth studies are needed to clarify the current epidemiology of these diseases and the changes that are occurring in addition to developing effective control tools. Papers addressing these topics are invited for this Special Issue, especially those combining a high level of academic discourse coupled with provision of optimal proposals that have a practical focus.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
