

Special Issue

Community-Based Solutions for Injury and Violence Prevention

Message from the Guest Editor

It is with great pleasure that we announce this Special Issue entitled “Community-Based Solutions for Injury and Violence Prevention”. Injuries, whether intentional or unintentional, represent a leading cause of mortality and excess morbidity globally. Community-based interventions increasingly show great promise in reducing injuries. Bottom-up approaches, local capacity-building, intersectoral collaboration, and tailored injury surveillance strategies are among the many components involved in the creation of sustainable injury prevention efforts at community levels. Additionally, the complementarity of practice-based evidence and evidence-based practice is of paramount importance in developing injury reduction strategies. This series represents an important contribution of original research articles, or comprehensive review papers, that examine interventions, trials, or case studies for injury and violence prevention in community-settings. This Special Issue seeks to develop discussion around up-and-coming or state-of-the-art research on practice and advancements in the field of injury and violence prevention.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
