

Special Issue

Innovations in Healthy Aging

Message from the Guest Editors

Recent times have demonstrated the importance of healthy aging—especially given the rapid growth of the aging population. This Special Issue casts a wide net to invite papers that address issues related to both healthy aging and neurodegenerative diseases, such as Alzheimer's disease and related dementias. We welcome papers using a variety of techniques, sample populations, and those from around the globe. In addition, this Special Issue invites research articles and review papers that investigate interventions, and/or the mechanisms underlying healthy ageing and neurodegenerative diseases. Although we are casting a wide net, we especially welcome articles that address the neural, sensory, motor, social, cognitive and affective processes in healthy aging and neurodegenerative diseases, and their interrelationships. Our hope is that this Special Issue will draw a variety of research papers that will help us to comment on recent advances, innovations, and future directions in healthy aging.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
