Job Insecurity and Its Consequences in a Context of Economic Crisis

Message from the Guest Editors

Organizations today are in a state of constant change to guarantee their survival and competitiveness in the market. Most of these changes (i.e., downsizings, mergers, acquisitions, and so on) involve ambiguity, job instability, and uncertainty inside firms and, in many cases, job insecurity. A relevant number of practitioners and researchers have paid attention to job insecurity; thus, extended literature can be found. It has been shown that job insecurity is associated to detrimental consequences for employees and organizations (i.e., job satisfaction, performance, intention to quit, turnover, commitment, or health). Accordingly, this Special Issue is focused on exploring the topic of job insecurity from a psychological perspective in a crisis context and mitigating its negative consequences. Papers addressing these topics are invited for this Special Issue, especially those combining a high academic standard coupled with a practical focus on providing optimal solutions. Best regards, Dr. Beatriz Sora

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
