

Special Issue

Innovative Interventions for People with Dementia

Message from the Guest Editor

Dementia is a syndrome characterized by a deterioration in cognitive function beyond what is expected from normal ageing. More than 55 million people are living with dementia globally. Dementia has created physical and psychosocial impacts on the individuals, but also their families and caregivers. Much can be done to support and enhance their lives. This Special Issue calls for high-quality, multi-disciplinary research papers which aim to present innovative interventions to address the issues associated with dementia. We anticipate that the collection of articles will inform practitioners and administrators of the latest evidence and will facilitate the translation of the evidence into practice. Topics of interest include, but are not limited to, the following: telehealth intervention during pandemic; virtual and augmented reality intervention; intervention for enhancing caregivers' empathy; empowerment intervention for people with young-onset dementia; multi-sensory intervention using technology; simulated presence therapy; dyadic psychosocial intervention; mindfulness-based intervention for people with dementia; serious gaming; and art-based intervention.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou

RCMI Center for Urban Health Disparities Research and Innovation,
