

Special Issue

Everyday Life Behaviors, Medical Disorders, and Psychopathology through the Lens of the Psychodynamic Approach

Message from the Guest Editors

This Special Issue prompts research that analyzes clinical disorders (both psychological and medical diagnoses) and everyday life behaviors (e.g., romantic or work/school relationships, attitudes towards work/study) by exploring the role of psychodynamic variables such as attachment styles, early parent–child relationships, and defense mechanisms. Moreover, it welcomes theoretical papers that analyze everyday behaviors and clinical disorders through the application of psychodynamic theories like the Structural Approach, *Object Relations Theory*, the Interpersonal-Relational Approach, Attachment Theory, and Mentalization. Finally, this Special Issue also accepts reviews of the literature concerning variables critical for the psychodynamic perspective (e.g., insight, attachment, transfer, alliance) and case studies that apply psychodynamic treatments.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou

RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
